Group Activity: Determine the Task

Read: From coronavirus to bushfires, misleading maps are distorting reality

<https://firstdraftnews.org/latest/from-coronavirus-to-bushfires-misleading-maps-are-distorting-reality/>

INSTRUCTION

- Realize that many maps are provided without proper context. Your goal is to determine that context.
- With a group, perform the following activities:
 1. Create a shared Google doc
 - Add your names and set permissions
 2. Study the following election-related map visualizations
 3. Write 2-4 sentences per visualization
 - Discuss what data are being encoded (i.e., data abstraction + visual encoding) and what information the visualization is (and is not) conveying.
 4. Submit your document using the Google Form on the course website.

A (brief/simplified) Description of US Electoral Process

- Elections are run per county. Counties tally votes and report to the state.
- (Generally) The popular vote is counted per state, and the winner receives the state's electors.
- The number of electors per state is determined by the number of senators (always 2) and the number of congressional districts (proportionate to population).
- The 538 electors vote for the president.

Donald J. Trump 
@realDonaldTrump

Share of vote in the 2016 presidential election

(Source: Cook Report)

VISUALIZATION #3

- More votes for Donald Trump
- More votes for Hillary Clinton

Votes for Donald Trump

Votes for Hillary Clinton

Fair bit of data wrangling but finally...a 1 dot = 1 vote
dasymetric dot density 2016 Presidential election map
from [@ArcGISPro](#). 65,844,61 blue dots. 62,979,636 red
dots. Count 'em! (note: this is just a rough screengrab,
will webify & make pretty)
